Project Name	Personalized network assistant
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/Sruthimaram07/personalized-networking-assistent
Programming Language(s)	Python, HTML, CSS, JavaScript
Framework(s) Used	FastAPI, Streamlit, Transformers (DistilBERT, GPT-2), PyTest

Key Features Implemented	☐ User Registration and Login ☐ Event Description Input ☐ Theme Extraction using DistilBERT ☐ AI-based Conversation Starter Generation using GPT-2 ☐ Fact Checking using Wikipedia API ☐ Conversation History Storage ☐ Feedback Collection ☐ Responsive Streamlit User Interface ☐ Unit Testing using PyTest
Pending / Incomplete Features	• User profile customization • Multi-language support • Cloud deployment • Real-time collaboration • Advanced analytics dashboard
Setup / Run Instructions	1. Clone the GitHub repository. 2. Create and activate a Python virtual environment. 3. Install dependencies using pip install -r requirements.txt. 4. Run the FastAPI backend (uvicorn main:app --reload). 5. Run the Streamlit frontend (streamlit run app.py). 6. Open the application in your browser.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	yes
2	Meaningful variable and function names are used	yes
3	Code includes comments / documentation where necessary	yes
4	Error handling is implemented for critical operations	yes

5	The application runs without critical errors	yes
6	Code is committed to a version control repository	yes

Additional Notes / Comments: The **Personalized Networking Assistant** is an AI-powered application that uses **DistilBERT** to extract themes from event descriptions and **GPT-2** to generate personalized conversation starters. It also integrates **Wikipedia API** for fact verification, provides conversation history and feedback features, and is developed using **FastAPI**, **Streamlit**, and **PyTest** with a modular, reusable code structure.
