

Solution Requirements

Date	4 july 2026
Team ID	XXXXXX
Project Name	Personalized network assistant
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users can securely sign up and login using email,phone number,or google account with otp verification	high
2	Authorization levels	User roll can access personal profile,intrest,events,recommendtions,enchats.admin can manage users,events,and system settings	high

3	External interfaces	Integrates with Google Gemini API, Firebase Authentication, Firestore Database, Google Calendar API, and Notification services.	high
4	Transactions processing	Stores user profiles, interests, event registrations, AI chat history, and recommendation results in the database.	high
5	Reporting	Generates user activity reports, recommended events, chatbot usage statistics, and admin dashboard reports.	medium
6	Business rules, etc.	Recommendations are generated only from user interests and preferences. Duplicate event registrations are prevented. AI responses are personalized	high
7	Compliance to laws or regulations	User data is protected using encryption and privacy policies. Personal information is not shared without permission.	medium
8	Other	Supports AI chatbot, personalized notifications, profile updates, and feedback collection.	high

Step 2: Non-Functional Requirements (NFR)

1	Performance & Speed	AI responses and page loading should be fast.	Response time < 2 seconds
2	Scalability	System should support many users and increasing event data.	Supports up to 10,000 users
3	Security & Data Privacy	User data should be encrypted and securely stored.	AES-256 encryption, secure authentication
4	Reliability & Availability	System should be available continuously with minimal downtime.	99.9% uptime
5	Usability & Accessibility	User-friendly interface for mobile and web with simple navigation	Easy to use, responsive design
6	<i>Other</i>	Maintainable, portable, and easy to update with new AI features.	Modular architecture and cloud deployment
