Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman, Pytest
Type of Testing	Functional Testing, API Testing
Target Module / API	Theme Extraction, Conversation Generator, Fact Checking API, Feedback Module
Test Environment	Local (Windows 11, Python 3.13, FastAPI, Streamlit)
Test Date	07-07-2026 (or your actual testing date)

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Generate conversation starters from event description	1	5	Conversation starters generated successfully
2	Extract themes using DistilBERT	1	4	Relevant themes extracted correctly
3	Verify facts using Wikipedia API	1	3	Correct fact-check results returned

4	Save user feedback and conversation history	1	2	Data stored successfully without errors
---	---	---	---	---

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.2 sec	pass	Quick response for user queries
2	Response Time (Max)	< 5 seconds	3.8 sec	pass	Within acceptable limit
3	Throughput (Req/sec)		45 req/sec	pass	System handled multiple requests efficiently
4	Error Rate	< 1%	0.4%	pass	Very low failure rate
5	CPU Utilization	< 80%	65%	pass	Cpu usage remained stable
6	Memory Utilization	< 80%	72%	pass	Memory usage within limits

Step 4: Observations & Analysis

Key Findings:
 [Describe what the test results revealed about your system's performance]

Bottlenecks Identified:
 [List any performance bottlenecks observed during testing]

Optimization Steps Taken:
 [Describe any changes or optimizations made to improve performance]

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):
