

Scalability & Future Plan

Date	9 july 2026
Team ID	XXXXXX
Project Name	Personalized network assistant
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Limited to a single-user/local deployment	Cannot support multiple concurrent users efficiently	high
2	No database for long-term conversation history	User data is not permanently stored	medium
3	Limited AI personalization based on user preferences	Recommendations may not improve significantly over time	medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Supports local users only	Deploy on a cloud platform with load balancing to support multiple users
2	Data Storage	Conversation history stored temporarily	Integrate a database such as PostgreSQL or MongoDB for persistent storage
3	Performance	AI models run on a local system	Optimize model inference, add caching, and use GPU/cloud-based processing
4	Security	Basic input validation	Implement secure authentication, HTTPS, JWT, and encrypted data storage

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
-------	-------------------------------	-----------------	-----------------

Phase 2	Add multilingual support and personalized user profiles	3–6 Months	improves accessibility and user experience
Phase 3	Cloud deployment with database integration and real-time analytics	6–9 Months	Supports more users and improves scalability
Phase 4	Integrate advanced AI models, calendar integration, and networking recommendations	9–12 Months	Provides smarter, personalized networking assistance and enhances productivity
